

GS Inima reinforced its environmental commitment with the “To Microplastics, Macrosolutions” campaign on World Environment Day.

- Spain, Brazil, Mexico and Oman organized open days in June, bringing together more than 450 children and adults with the aim of raising awareness of microplastic pollution and promoting sustainable habits.

Spain, 1st. July, 2025.

To mark **World Environment Day on 5 June**, GS Inima launched the internal campaign “**To Microplastics, Macrosolutions**”, in line with this year's global theme of tackling plastic pollution, one of the major environmental challenges of our time.

Throughout June, the campaign was implemented in **18 of the company's business units**, with simultaneous activities taking place in **Spain, Brazil, Mexico and Oman**. The activities aimed to raise awareness of the urgent need to reduce plastic use, particularly single-use plastics, and to promote accessible, sustainable solutions in daily life.

Activities included **open days offering employees, their families and local communities** the chance to take part in educational activities, children's games, recycling workshops and tree planting.

More than 450 people -children and adults alike- **joined these initiatives**, becoming the driving force behind a necessary change that begins with small gestures.

As well as promoting environmental awareness, these events **strengthen the bond between the company and its local community**, providing opportunities for intergenerational encounters and reinforcing an organizational culture committed to sustainable development.

The activity also presented a **valuable opportunity for the youngest children to learn about their parent's work, while familiarizing themselves with the operation of the water treatment and desalination plants**. Through guided tours, they discovered how water is managed and why its care is important for the planet. They were also given a challenge during the day: to spend a whole day without using any plastic products, to make them reflect on their consumption habits.

At GS Inima, we understand that sustainability cannot be approached superficially, but rather requires a deep and coherent rethink of the way we do things, with commitment, awareness and sensitivity.

These small yet significant **actions demonstrate the importance of acting today to create a more balanced and sustainable future. In this future, we are all active participants in the change**, especially the new generations, and the protection of water and the environment is a shared priority.

About GS Inima Group

GS Inima, Group belonging to the Korean multinational GS E&C (<http://www.gsenc.com/en/>), is specialized in Environmental activities, associated with the integral water cycle and renewable energy. The GS Inima Group is active in all phases of the projects in which it participates: Design, Engineering, Procurement, Construction, Financing, Operation and Maintenance, and is active in both the public and private markets.
